United we are Antares, we lead the way.

Just like the Antares star that lead the way for the Apollo 14 mission. We chose the shield and 4H symbol because our bond in 4-H makes us as strong as a steel shield. We added the we show the light to the world. Our group added the shiney stars to the shield so we can light the way for others. As a team we decided to add NASA and Space Camp also.

Without NASA we wouldn't be here at Space Camp. Together we added the rocket to symbolize all of the missions - successes and failures. The names are for everyone, equally important on our team. The big star, Antares, was added to remind everyone that we will always light the way, for you.
