

Nutrient Management Farmer Training Program

January 12 and 19, 2009
11am-3pm

UW- Fond du Lac, Room AE 205/206 (Across from Extension Office)

Is your answer “yes” to any of these questions?

- Want to save money on fertilizer inputs without sacrificing yield and/or profit?
- Want to know how to maximize the nutrient value of manure and legumes?
- Want to be sure you are in compliance with county, state, and federal nutrient management regulations?
- Want to know what cost-sharing opportunities are available for nutrient management and conservation practices?
- Want a customized and usable nutrient management plan for your farm?
- Want to protect yourself from nutrient management litigation?
- Want to show that you are concerned about the environment?

If your answer is yes to any of these questions, then you will benefit from participating in this two-day Wisconsin Nutrient Management Training Program.

Some of the topics to be addressed:

- Determining optimum N, P, and K needs for agronomic crops
- Figuring manure and legume credits for your farm
- Understanding the impact of livestock and crop production on the environment
- Components of a nutrient management plan
- Nutrient management regulations that apply to your farm

This two-day program has already been completed by hundreds of livestock and crop producers from around the state. At no time in our history has the value been greater or the stakes higher to have a firm understanding and plan for nutrient management.

Each participant receives a WI Nutrient Management Notebook and certificate of program completion. Registration numbers will be limited so please register early. This program is being offered and taught by the Fond du Lac Co. Land and Water Conservation Dept. and UW – Extension.

“I don't think much of a man who is not wiser today than he was yesterday.” ~Abraham Lincoln
